Take
a deep
breath

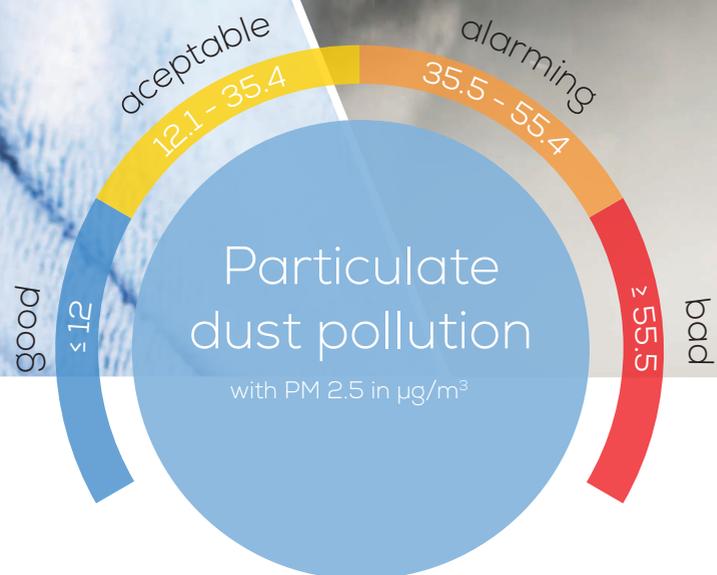

HealthyAmbientAir
Initiative

Head in the clouds,
feet on the ground.

Take a deep breath
at home, too.

Thick air – we don't let it into our home

Air purifier LR 500

-  The value **PM 2.5** stands for **floating fine particles** with a diameter of less than **2.5 micrometers** (hair has a diameter of 70 micrometers). They find their way inside the bronchial tubes and can cause disorders of the airways and lungs as well as cardiovascular diseases.
-  Fine particles can get inside through **open or leaking windows**
-  Our **air purifiers** remove fine particles and care for clean air
-  For your health, have an eye on **clean and healthy air in your own four walls**

Breathe deeply with our 3-layered filter system

-  The air within our homes can contain **two to five times more allergens and harmful substances** than the air outside¹
-  Those who can not stay in nature during the pollen season would like to be able to **breathe deeply, at least indoors.**
-  Thanks to the three-layered **EPA/HEPA filter system** the Beurer air purifiers remove up to **99.95 % of the harmful substances** in the indoor air.

Air purifier LR 500

Up to 99.95 %
filter performance

...with integrated
three-layered **EPA/HEPA filter**
system.

“beurer
FreshHome”
app

...enables you to operate
the LR 500 comfortably
on **the go**.

Up to 106 m²*

Find the perfect
device for **your**
room size.

Air purifier
at home

For allergy
sufferers

Especially devices with
additional air cleaning through
ultra-violett light or
ion function fit you best.

*NRCC-S4013-2011

Most of us spend up to **90 % of our lives indoors**. The quality of the indoor air during the day or at night plays an important role for our health and our long-term wellbeing.

Air purifier LR 500

Fresh up!

Air humidity in the green area. Fresh, humidified air increases the wellbeing.

Low humidity dries out the mucosals

Humidified air binds dust particles – Spreading of pathogens is prevented

Calm climate – fresh air

Optimum of 40 – 60 % humidity

-  A lot of people suffer from dry air. Especially in the winter months with indoor heating **the recommended humidity in closed rooms of 40 - 60 %** often is not reached.
-  It would be easy to simply open a window, however, **a healthy and fresh indoor climate is a complex system.**
-  With their **ultrasound humidification and water evaporation technology** Beurer air humidifiers provide an optimum room climate.

Ultrasound humidifying technology

for extremely quiet and energy-saving devices.

Removable water tank

...for simple filling and cleaning.

Air humidifier for your home

Night mode

without disturbing lighting and **extremely quiet** operation.

„beurer FreshRoom“ app

... for **control** and **long-time analysis** of the humidity with our thermo-hygrometer HM 55.

Air that is too dry can affect our health. With the help of an air humidifier at home, dust particles that spread in dry air are bound and prevent pathogens from spreading. Humidified air increases the power of concentration and prevents eyes and skin from drying out.

Air humidifier LB 37
