

## HealthManager App

The free **HealthManager App** allows you to manage data with a range of products. Switch easily between **weight, blood pressure, blood glucose, activity<sup>2</sup> and sleep<sup>2</sup>**. Your last measurements for each section are displayed in a clear overview. Progress graphs and tables with measured values give you a quick and convenient overview of your measurements and make managing mobile health data fun – from anywhere and at any time.

## HealthManager Web

You can always keep an eye on your data with the free **HealthManager Web** version. The exchange of your health data between HealthManager App and HealthManager PC Software will take place under **connect.beurer.com**

## HealthManager PC Software

The free **HealthManager PC Software** enables you to analyse your body values even more closely. Additional views and settings allow for individual evaluations. You can use export or email functions to conveniently export your data and share it with others. You can also easily synchronise your data within the HealthManager system.

## Data security and privacy protection

The confidence of customers in our data protection and security measures is of the utmost importance to Beurer. This is why we turned to a third party in the form of TÜV Rheinland.

TÜV Rheinland has certified the web application of the Beurer HealthManager according to the standard „Data protection and data security“.

Following a comprehensive security review, the specialists in the field of information security confirmed, among other things, that the online portal of the Beurer HealthManager meets the statutory requirements of the German Federal Data Protection Act.

Particular attention was paid to confidential health data, which the user stores when logging in online and is continuously saved when using the Beurer HealthManager.

**Beurer is the first manufacturer of medical products to be certified in the field of data protection and data security.**

### About TÜV Rheinland

TÜV Rheinland is the largest independent service provider to combine competence in the field of information security with comprehensive industry and mobility expertise and has been ensuring the technical security of people and their environment on an international level for more than 140 years.

## Safety analysis according to DIN ISO 27001 and DIN ISO 18028

As part of the certification process, we performed a data protection audit as well as internal and external security analyses. These involved inspections of various computer centres along with a simulation of an external hacker attack with the aim of stealing confidential data.

The result was that TÜV Rheinland was able to certify that **the online application of the Beurer HealthManager meets the legal requirements of the German Federal Data Protection Act (BDSG) – both from a technical standpoint and with regard to responsibility and processes – and complies with important aspects of international standards such as ISO 27001 and ISO 18028. This means:**

- The confidentiality and integrity of the processed information are assured
- The declarations of the data privacy statement are effectively implemented
- Personal data is effectively protected in accordance with the German Federal Data Protection Act
- Externally accessible, technical systems are effectively protected against unauthorised use.

**To ensure a high level of data security, Beurer stores customer data in two independent computer centres.**

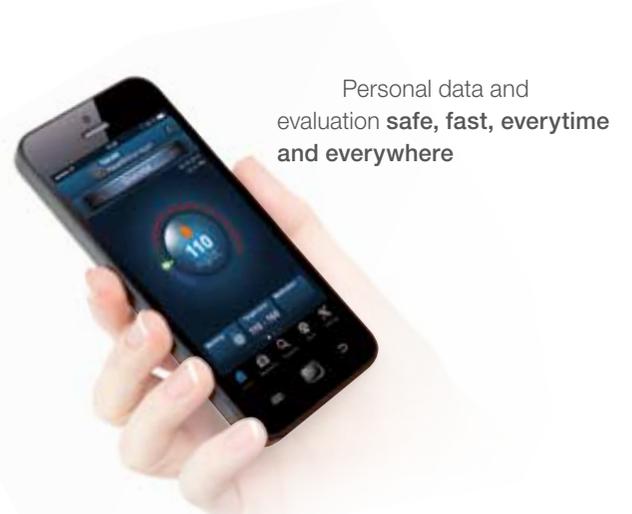

## TÜV certified online application Beurer HealthManager Web

The Beurer HealthManager is a health management system comprising a mobile app, PC software and the newly certified web platform.

To register and download the HealthManager to an end device, the user must log in with their personal data prior to first use.

The user can save measured body values such as weight, blood pressure and blood sugar either via USB or wirelessly via *Bluetooth*<sup>®</sup> Smart technology or NFC (Near Field Communication) and then view graphical representations of this data.

### Data protection and data security

The TÜV Rheinland certification is valid for a period of three years. A follow-up audit is performed after 12 months, to establish whether data protection and security is still assured and how processes can continue to be optimised. After 36 months, a re-certification must take place as a means of continuing the ongoing improvement process with regard to data protection and security in the long term.
