laboratory

Our sleep

The demands on our daily lives are getting bigger. Family and work, exercise and sport, meeting friends or simply taking a rest – all this and much more needs to be reconciled. A healthy and restful sleep is regenerative and a source of energy for people. But what can we do if things don't quite work out like this? If you feel like you've been knocked out in the morning, preferring to remain in bed and pull the blanket over your head:

Get to the root of the problem by analysing your sleep at home as precisely as in a sleep laboratory.

in cooperation with:
EarlySense
Proactive Patient Care

The application – it couldn't be easier

The SE 80 sleep sensor is simply placed underneath the mattress. No matter the thickness of your mattress, your sleep activities are transferred contact-free and unnoticed via Bluetooth® Smart technology. All values of your sleeping activities are continuously transferred to your smartphone where they are recorded and evaluated directly via the Beurer SleepExpert app.

The Beurer SleepExpert app

In conjunction with the SE 80 sleep sensor, the free of charge Beurer SleepExpert app records all of your sleep activities with extreme precision, evaluating and displaying your data in graphic form.
